

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

COURSE OUTCOMES – (2017-18)

ENGINEERING PHYSICS-I (RAS-101): C -101

Year of Study: 2017-18

C101.1	Conceptual development to appreciate modifications in physical laws with Relativistic Mechanics.
C101.2	To develop comprehension of matter and its behavior at the atomic scale using principles of wave mechanics
C101.3	To provide acquaintance of interference and diffraction phenomena which are helpful to study daily life optical phenomena.
C101.4	Imparts knowledge of LASERs and polarization which helps in understanding the nature of light and industrial applications of polarization.
C101.5	To develop knowledge of optical fibers and their propagation mechanism to comprehend immense technologically applications.

ENGINEERING CHEMISTRY (RAS – 102/202):C- 102

Year of Study: 2017-18

C-102.1	Acquire knowledge to describe the bonding and its application and develop understanding of the concept and application of liquid crystals and nano materials.
C-102.2	Principles of polymers chemistry and their engineering applications provides knowledge to understand the structures, properties and their world wide applications.
C-102.3	Imparting fundamental knowledge of electrochemistry & lead storage battery.
C-102.4	Gives knowledge to understand the water treatment methods for domestic and industrial purposes.
C-102.5	Impart knowledge to understand about functional materials and its industrial applications. Knowledge to analyze and interpret spectral data.

ENGINEERING MATHEMATICS-I (RAS-103): C-103

Year of Study: 2017-18

C-103.1	Basics of Differential Calculus for functions involving several variables in Cartesian, Cylindrical and Spherical geometries.
C-103.2	Basic knowledge of Partial Differentiations, Extrema of function of several variables and Lagrange's method of multiplier's.
C-103.3	Matrix methods and Eigen value problems and their applications in solving linear system of equations.
C-103.4	Evaluate the multiple integrals and use them in finding the area and volume of a region bounded by the given curves/surfaces.
C-103.5	Calculate the derivatives and integrals for vector valued functions. To apply Green's, Stokes' and Gauss divergence theorem to evaluate Integrals.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ELECTRONICS ENGINEERING (REC-101/ REC-201): C-104 Year of Study: 2017-18

C-104.1	To develop an insight into Semiconductors and diodes like devices.
C-104.2	To acquire knowledge of transistors, their configurations, process of amplification and about FET and MOSFET.
C-104.3	Develop understanding of operational amplifiers, their configurations, parameters, modes of operation and applications
C-104.4	Gain knowledge about various instruments like Cathode Ray Oscilloscope, Digital Voltmeters and Digital Multimeters.
C-104.5	To learn about the fundamentals of Communication Engineering and different modulation schemes such as AM.

BASIC ELECTRICAL ENGINEERING (REE-101/REE-201) : C-105 Year of Study: 2017-18

C105.1	Solve and analyze the DC & AC electrical circuits using KVL/KCL and network Theorems.
C105.2	Solve and analyze the behavior of AC electrical circuits and resonance.
C105.3	Apply the concepts of measurements in measuring electrical quantities.
C105.4	Solve and analyze the behavior of magnetic circuits and demonstrate the working of single phase transformers, auto-transformer and their applications
C105.5	Demonstrate the working principles of basic electrical machines including DC as well as AC machines.

ELELMENTS OF MECHANICAL ENGG (RME-101/RME-201) :C-106 Year of Study: 2017-18

C-106.1	Discusses in detail of equilibrium condition and free body diagram of different body for different condition of motion and force application
C-106.2	Aims to providing an overview of different structure and shear force/bending moment diagram at different section of a beam.
C-106.3	Provides the basic knowledge of centroid , centre of gravity and moment of inertia of plane areas and rigid body
C-106.4	Provides the basic knowledge of simple stresses and strain, engineering materials, mechanical properties of materials.
C-106.5	Imparting sound fundamental knowledge of thermodynamics, laws of thermodynamics, Imparts knowledge of I.C engines, basic thermodynamic cycles.

COMPUTER SYSTEM AND PROGRAMMING IN C(RCS-101/201):C-107 Year of Study:2017-18

C107.1	Able to have fundamental knowledge on basics of computers hardware, OS, PLs and number systems.
C107.2	Able to use different data types and operators in a computer program. I/O functions
C107.3	Control Statements and functions. Able to use loops and branching statements.
C107.4	Able to use different data structures, working with arrays, pointers. Able to write the programs based on arrays.
C107.5	Basics of Sorting, Searching, Able to understand the dynamics of memory by the use of pointers. Able to use I/O functions ,files and macros

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

PROFESSIONAL COMMUNICATION(RAS-104/RAS-204): C-108 Year of Study: 2017-18

C-108.1	Enables students and professionals to face the challenges of communicating effectively and efficiently.
C-108.2	Enables the students to handle all writing tasks in their academic and professional life with ease and confidence.
C-108.3	Attempts to introduce various techniques to improve confidence and effectiveness for making presentations and enhancing teamwork.
C-108.4	Aims at extending awareness and providing information and significant opinion on current topics.
C-108.5	Inculcates among students the team building and leadership skills and helps them to face challenges in the professional life.

ENGINEERING MATHEMATICS-II (RAS-203): C-109 Year of Study: 2017-18

C-109.1	To understand the methods of finding the solution of linear differential equations and their applications in engineering problems
C-109.2	To understand the series solution of Ordinary Differential Equations and Special functions.
C-109.3	Understanding Laplace Transformation and their applications in various problems of Electrical and Electronics Engineering.
C-109.4	Gather knowledge of Fourier series and solution of Partial differential equation of second order with constant coefficients.
C-109.5	To develop knowledge of PDE and their applications.

ENGINEERING PHYSICS -II (RAS-201) : C-110 Year of Study: 2017-18

C-110.1	Provides acquaintance to matter organization at the atomic level and tools to analyze solid state of matter.
C-110.2	Imparting knowledge of dielectric and magnetic materials to appreciate their electrical and technological applications.
C-110.3	Conceptual development of Electromagnetic theory to appreciate Maxwell's work and its deep rooted implications.
C-110.4	Provides knowledge about Solids especially Semiconductors and its industrial applications
C-110.5	To comprehend conceptual theory of novel materials – superconductors and nanomaterials and explore possible applications in diverse fields.

ENGINEERING PHYSICS LAB (RAS-151/RAS-251): C-111 Year of Study: 2017-18

C111.1	To familiarize with various optical devices and develop experimental understanding of optical processes.
C111.2	To enable students develop ability to measure, probe, analyze and deduce physical laws like Stefan's law, Faraday's law, Hall's effect, B – H curve etc.
C111.3	Development of experimental skills to handle equipments like LASERs, spectrometers, electrical devices etc.
C111.4	Provides knowledge about optical gadgets like Lasers and estimation of numerical aperture.
C111.5	Development of analytical skills to compare experimental results with theoretical concepts and speculate reasons for discrepancies.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ENGINEERING CHEMISTRY LAB(RAS-152/RAS-252): C-112

Year of Study: 2017-18

C-112.1	Provides knowledge of estimation of hardness in a water sample
C-112.2	Ability to determine the amount of available chlorine in a water sample.
C-112.3	Ability to estimate the strength of chloride ion in water sample.
C-112.4	Gains an understanding of oxidation and reduction reactions related to engineering applications
C-112.5	Provides acquaintance to pH meter for the measurement of pH of a solution

BASIC ELECTRICAL ENGINEERING LAB (REE-151/REE-251): C-113 Year of Study: 2017-18

C113.1	Conduct experiments illustrating the application of KVL/KCL and network theorems to DC electrical circuits.
C113.2	Demonstrate the working of various measuring instruments like ammeter, voltmeter, wattmeter, energy meter etc.
C113.3	Conduct experiments illustrating the working of magnetic circuits.
C113.4	Conduct experiments illustrating the working of single phase transformers and auto-transformers.
C113.5	Conduct experiments illustrating the behavior of AC and DC machines and identify the type of electric machine used for a particular application.

WORKSHOP PRACTICE (RME-152/ RME-252): C-114

Year of Study: 2017-18

C-114.1	Provides basic knowledge of various tools and operations like filing, drilling, tapping which are used in fitting shop.
C-114.2	Provides basic knowledge of various tools used in black smithy shop and various black smithy operations like edging, fullering, bending, etc.
C-114.3	Provides the basic knowledge of tools & operations of Gas welding & Arc welding.
C-114.4	Provides the basic knowledge of tools & operations of sheet metal shop and various sheet metal operations like drawing, blanking, punching, etc.
C-114.5	Provides the basic knowledge of parts & operations of lathe machine

PROFESSIONAL COMMUNICATION LAB (RAS-154/ RAS-254): C-115 Year of Study: 2017-18

C-115.1	Make students learn problem solving, decision making and reasoning skills through knowledge imparted and activities conducted on group discussion.
C-115.2	To help students imbibe the methods and techniques of facing interview in a formal environment.
C-115.3	Facilitates the communication skills of students for seminar/ conferences and workshops with emphasis on paralinguistic and body language.
C-115.4	Speaking in public involves preparing, thinking and acting confidently, and paying attention to your voice and body language.
C-115.5	To enable them to deliver proper Presentation / Theme presentations and enhance their argumentative skills.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ELEMENTS OF MECHANICAL ENGINEERING LAB (RME 151/251): C-116 Year of Study: 2017-18

C-116.1	Comparison of resultant of two coplanar forces obtained experimentally and graphically.
C-116.2	To Calculate the coefficient of friction between different pairs of given surfaces.
C-116.3	To Determine the mechanical advantage, velocity ratio and efficiency of screw jack.
C-116.4	To calculate impact strength of the M.S. specimen by using Izod /Charpy Testing Machine
C-116.5	To calculate the hardness of the specimen by using Hardness testing machine.

COMPUTER AIDED ENGG. GRAPHICS LAB (RCE 151/251): C-117 Year of Study: 2017-18

C-117.1	To provide the knowledge of drawing instrument and their uses and to draw the lettering, types of lines.
C-117.2	To provide the knowledge of orthographic projection and to draw the projection of points in the entire four quadrant.
C-117.3	To draw the orthographic projections of straight lines (First angle projection only).
C-117.4	To draw the projection of plane surfaces (First angle projection only).
C-117.5	To draw the projection of solids in different positions. (first angle projections only).

C – PROGRAMMING LAB (RCS-151/251): C-118 Year of Study: 2017-18

C118.1	Able to have fundamental concept on basics commands in Linux/DOS, working with Windows Operating Systems.
C118.2	Able to write, compile and debug programs in C language. Knowing data types
C118.3	Able to formulate problems and implement algorithms in C. Able to write decision making programs
C118.4	Able to write program based on different data structures, working with arrays, pointers. Able to write the programs based on arrays.
C118.5	Able to effectively choose programming components that efficiently solve computing problems in real world.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

MATHEMATICS–III (RAS-301): C-201

Year of Study: 2017-18

C-201.1	To solve complex variable problems related to the field of fluid mechanics, fluid dynamics and electric field. Students will be able to identify and formulate the problems related to Electronics.
C-201.2	To analyze the data finding their moments, their frequency distribution, best fitting the curve in experimental data.
C-201.3	To use the probability distribution in the form of Binomial, Poisson and Normal distribution in industrial application.
C-201.4	To use the hypothesis testing in the field of Engineering, Medicine, agriculture etc.
C-201.5	To find the solution of algebraic as well as transcendental equations using various methods using Bisection, Newton Raphson Method, Regular False methods as well as interpolating techniques.

NETWORK ANALYSIS & SYNTHESIS (REE-305): C-202

Year of Study: 2017-18

C-202.1	Students will be able to identify and formulate electronics problem by using the concept of signals.
C-202.2	The students will be able to analyze the electric networks using network theorems, system functions, step and impulse response, convolution integral, amplitude and phase response.
C-202.3	The students will be able to solve the electric networks using the concept of graph theory and also determine the stability using Routh Hurwitz criterion.
C-202.4	The students will be able to analyze the electric networks using two port parameters.
C-202.5	The students will be able to synthesize simple RC & LC networks and operational amplifier based active networks.

DIGITAL LOGIC DESIGN (REC-301): C-206

Year of Study: 2017-18

C-206.1	To be able to understand numeric information in different forms Binary, BCD, 1's & 2's complements, Hamming code and also represent digital function in SOP/POS forms.
C-206.2	To be able to analyze and design combinational circuits using MUX, Decoder, and DeMUX.
C-206.3	To be able to analyze and design counters (synchronous and asynchronous) and shift registers using different types of Flip-Flops.
C-206.4	To be able to analyze and design synchronous and asynchronous sequential circuits using Flip-Flops and also determine the hazards and make the hazard free circuit.
C-206.5	To be able to apply acquired knowledge to implement digital circuits using memory devices: ROM, RAM, PROM, PLD etc. also understand the concept of logic families, fan out/fan in, noise margin.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ELECTRONIC DEVICES AND CIRCUITS (REC-302):C-203 **Year of Study: 2017-18**

C-203.1	Understand the internal structure of semiconductor material and the flow of current in junction under different bias condition.
C-203.2	Explain the working of different Opto electronic devices.
C-203.3	Analyze transistor and MOSFET amplifier at low and high frequency
C-203.4	Evaluate the performance of different feedback topologies.
C-203.5	Design the different type of LC and RC oscillator

SIGNALS AND SYSTEMS (REC-303):C-204 **Year of Study: 2017-18**

C-204.1	To understand the types of signals and systems, time scaling & shifting correlation of energy and power signals.
C-204.2	To characterize LTI systems and determine energy and power spectral density also analyze the first & second order systems.
C-204.3	To determine Fourier transforms for continuous-time and discrete-time signals and their applications in engineering problems.
C-204.4	Understand the combined implications of the Laplace and Z transform domains and the Regions of convergence (ROC) and their applications in engineering problems.
C-204.5	Understand the sampling theorem, frequency domain representation of sampling and reconstruct band limited signals from its samples.

DIGITAL LOGIC DESIGN LAB (REC-351): C-211 **Year of Study: 2017-18**

C-211.1	To verify the truth table of various logic gates.
C-211.2	Students will be able to implement the combinational circuits in SOP/POS forms using NAND/NOR gates and verify their truth table.
C-211.3	Able to implement and design digital combinational circuits like decoders, encoders, multiplexers, and de-multiplexers including arithmetic circuits (half adder, full adder, multiplier).
C-211.4	Able to analyze implement sequential digital circuits like flip-flops, registers, counters.
C-211.5	Design and implements the digital circuits using memory devices: ROM, RAM, PROM, PLD etc. Also verify the truth table the circuits.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ELECTRONICS DEVICES AND CIRCUITS LAB (REC-302):C-212 Year of Study: 2017-18

C-212.1	Students able to identify the active and passive components and to measure the voltage current frequency using multimeter and CRO.
C-212.2	Able to plot the I-V characteristics of two terminal devices (Diode, Zener Diode, LED) and compare with theoretical characteristic.
C-212.3	Able to plot the characteristics of three terminal devices (BJT, JFET and MOSFET) and compare with theoretical characteristic and measure their parameters.
C-212.4	Able to analyse the o/p wave form and measure parameters of electronic circuits (Rectifiers, Clipper, Clamper, Filters) and compare with theoretical values.
C-212.5	Able to analyze the o/p wave form and measure parameters of BJT CE amplifier, Op Amp and wein bridge oscillator.

SIGNALS AND SYSTEMS LAB (REC 353) C-233 Year of Study: 2017-18

C-233.1	Understand the basic concepts matrices , Boolean algebra and logical operation to use MATLAB
C-233.2	Analyze basic function (step, impulse, rect etc.) using MATLAB
C-233.3	Student must be able analyze signals in order to understand their time-domain behavior and calculate their frequency spectra using MATLAB
C-233.4	Ability to analyze systems in order to calculate, estimate and classify their impulse, step and frequency response using MATLAB.
C-233.5	Ability to apply difference equations and the Z-transform in calculating the output of a digital system given any digital input.

ELECTRONICS WORKSHOP & PCB LAB (REC-354): C-210 Year of Study: 2017-18

C-210.1	Students able to identify the active and passive components and to measure the voltage current frequency using multimeter and CRO.
C-210.2	Design of step down transformer of 5KVA and test its performance.
C-210.3	Students able to make art work, positive/negative film, and draw it on PCB using UV exposure of the given circuit (5 V power supply).
C-210.4	Students able to etch & drill the PCB and solder the components on PCB for the given circuit (5V power supply).
C-210.5	Test and measure the performance of the soldered PCB and fit the manufactured PCB in cabinet with knobs.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

UNIVERSAL HUMAN VALUES & PROFESSIONAL ETHICS (RVE-301):C-207 Year of Study: 2017-18

C-207.1	To discuss a holistic vision towards life through Self Exploration and to appreciate the essential complementarities between Values & Skills ensuring sustained happiness and prosperity, the core aspirations of all human beings.
C-207.2	To understand human being as a co-existence of the sentient “I” and the material “Body” and the correct appraisal of Physical Needs and the meaning of prosperity in detail.
C-207.3	To interpret 9 feelings (values) in relationship to ensure justice and to make programmes to achieve comprehensive human goals like- Education-Right Understanding, Health-Education, Justice-Preservation, Production-Work and Exchange-Storage, leading towards an Undivided Society (“AkhandSamaj”).
C-207.4	To relate and visualize interconnectedness and mutual fulfillment among the four orders of nature, recyclability and self regulation in nature.
C-207.5	To acquire competence in professional ethics. Ability to identify and develop more people and eco-friendly appropriate technologies and management patterns.

ENVIRONMENT & ECOLOGY (RAS-402) C-240

Year of Study: 2017-18

C-240.1	To discuss basic knowledge about Environment, Ecosystems and its balance and the need for mass awareness.
C-240.2	To explore and understand about Human Activities-Food, Shelter, Socio-Economic Developments and their impacts on environment.
C-240.3	To analyze Sustainable Development and relevance of Environment Impact Assessment of developmental projects.
C-240.4	To interpret knowledge of Natural Resources- Forest, Water, Mineral, Land and Energy Resources.
C-240.5	To relate and understand Environmental Changes (POLLUTIONS) and Human Health and to acquire the sense of Environmental Protection through Legislations and Education

DATA STRUCTURE& ALGORITHMS (RCS-406): C-221

Year of Study: 2017-18

C-221.1	To understand the major algorithms and data structures
C-221.2	To test and compare the performance of algorithms.
C-221.3	To emphasize on right algorithm selection and choose the appropriate data structure and algorithm design method for a specified application
C-221.4	To understand and determine which algorithm or data structure to be use in different scenarios
C-221.5	To develop algorithms using recursive methods and properties of various data structures such as stacks, queues, lists, trees and graphs.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

MICROPROCESSORS & MICROCONTROLLERS (REC 401) C-241 Year of Study: 2017-18

C-241.1	Will acquire knowledge about 8085 Microprocessor & its architecture, evolution.
C-241.2	Develop assembly language programming skills and application of interfaces including DMA controller, timer in real time applications, memory, PPI, PIC for a given problem.
C-241.3	Understand and apply the fundamentals of microcontroller, its architecture and registers to be able to write program for various microcontroller based applications in C language.
C-241.4	Student will be able to use on-chip peripherals like timers, ADC for a given problem.
C-241.5	Student will be able to use various Serial communication protocols like UART, SPI for chip to chip communication.

ELECTROMAGNETIC FIELD THEORY (REC-402): C-224 Year of Study: 2017-18

C-224.1	Apply vector calculus to static electro-magnetic fields in different engineering field and situations.
C-224.2	Understand Maxwell's equations in differential and integral forms and apply them to various diverse engineering problems.
C-224.3	Examine the phenomenon in wave propagation in different media and its interfaces and in applications of microwave engineering.
C-224.4	Analyze the nature of electromagnetic wave propagation in guided medium which are used in microwave applications.
C-224.5	Evaluate the Time – varying fields, Poisson's and Laplace' equations and remember the use of them.

ELECTRONIC MEASUREMENTS & INSTRUMENTATION

(REC-403): C-223

Year of Study: 2017-18

C-223.1	Identify the different measurement standards, systems and Errors in an electronic measurement system
C-223.2	Describe different types of Analog and digital voltmeter and ammeter
C-223.3	Analyze different types of DC and AC bridges
C-223.4	Evaluate voltage, frequency and phase using CRO and DSO and compare the analog & digital CRO.
C-223.5	Compare different type of Calibration methods and recorders.

LASER SYSTEM & APPLICATION (REC 043) C-242

Year of Study: 2017-18

C-242.1	To understand the principles of laser action and the properties of laser light.
C-242.2	To understand the operations of different types of lasers.
C-242.3	To explain how material processing is accomplished with lasers.
C-242.4	To understand the basic elements of fiber optic communication systems.
C-242.5	To understand holography and its applications and metrological applications of laser.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

DATA STRUCTURE & ALGORITHMS LAB (RCS-456): C-225 **Year of Study: 2017-18**

C-225.1	To design and analyze simple linear and nonlinear data structures
C-225.2	To identify and apply the suitable data structure for the given real world problem
C-225.3	To Gain knowledge in practical applications of data structures
C-225.4	Be able to design and analyze the time and space efficiency of the data structure
C-225.5	Demonstrate familiarity with major algorithms and data structures and Analyse performance of algorithms

MICROPROCESSORS & MICROCONTROLLERS LAB (REC 451): C-243 **Year of Study: 2017-18**

C-243.1	Students will be able to load, execute and test a program on 8085 microprocessor kit.
C-243.2	Students will be able to use of MSP430 microcontrollers along with GPIO port pin for programming to interface with LEDs, push buttons, potentiometer and motors with the use of interrupts also.
C-243.3	Create a design for varying the speed of DC motor and intensity of blinking LED using PWM programming techniques.
C-243.4	Students will be able to use various on-chip peripherals like Watchdog timer, Timer, ADC and DAC, serial communication USCI module for UART with SPI protocol in different given application.
C-243.5	Implement IOT based applications on MSP430 development board that imparts knowledge to students about Internet of Things (IOT).

ADVANCED ELECTRONICS SYSTEM LAB (REC 451) C-244 **Year of Study: 2017-18**

C-244.1	Understanding the basics of simulation.
C-244.2	Analyzing the simulation results of basic electronic circuits
C-244.3	Implementing MOS based circuits like amplifiers, DC-DC converters etc.
C-244.4	Designing ring-oscillators using CMOS.
C-244.5	Simulating Current-mirror in MOS technology.

ELECTRONICS MEASUREMENT & INSTRUMENTATION LAB

(REC-453): C-228

Year of Study: 2017-18

C-228.1	To measure average voltage using AC voltmeter
C-228.2	To perform experiment on LCR bridge and determine its component values and to measure low resistance using Kelvin's double bridge.
C-228.3	To measure the % distortion of a given oscillator using distortion factor meter.
C-228.4	To identify the different transistor terminals using open circuit and short circuit test.
C-228.5	To measure the phase difference and frequency of two different signals using Lissajous pattern.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

INTEGRATED CIRCUITS (NEC-501R): C-301

Year of Study: 2017-18

C-301.1	Able to design the current mirrors using BJT and MOS for a given IO and perform DC & AC analysis of IC-741 circuit.
C-301.2	Design and analyze the op amp based active filters (Butterworth 1st, 2nd order, KHN) for the given parameters.
C-301.3	Able to investigate the static & dynamic characteristics of CMOS inverter & design logic circuits using CMOS.
C-301.4	Able to use Op Amp in non-linear applications (log/antilog amplifier, comparator, multivibrator, Schmitt trigger, precision rectifier and peak detector).
C-301.5	Understand the working of IC-555 timer, PLL and A-D & D-A converters and use the IC 555 in designing of multivibrator.

PRINCIPLES OF COMMUNICATION (NEC-502): C-302

Year of Study: 2017-18

C-302.1	Identify the key elements of Communication system and various amplitude modulations techniques involved.
C-302.2	Understand the features of angle Modulation Techniques and their comparative analysis and applications suitability
C-302.3	Able to understand the digital modulation and multiplexing techniques in the communication system
C-302.4	Acquired knowledge about pulse modulation, vocoders and mathematical representation of noise.
C-302.5	Evaluate the signal to noise ratio and figure of merit of various modulation techniques.

MICROPROCESSORS (NEC-503): C-303

Year of Study: 2017-18

C-303.1	Will acquire knowledge about 8085 Microprocessor & its architecture, evolution, , interfacing with memory & I/O devices with its need
C-303.2	Will acquire knowledge about 8086 Microprocessor & its architecture & pin diagram with all signal details.
C-303.3	Understand and apply the fundamentals of assembly level programming of 8086 microprocessors
C-303.4	To develop in students assembly language programming skills and use of interfaces including I/O devices, digital-to-analog converters and analog-to-digital converters, stepper motor, DMA controller and timer in real time applications of Microprocessor.
C-303.5	8086 microprocessor interfacing with memory, serial communication and interrupts.

CONTROL SYSTEM – I(NIC-501): C-304

Year of Study: 2017-18

C-304.1	Able to minimize the use of components in control system.
C-304.2	Able to find Controllability and observability of the given system.
C-304.3	Able to calculate steady state and transient response of the system.
C-304.4	Can compute stability of the system using different techniques.
C-304.5	Able to determine phase and amplitude response for the given system.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ANTENNA AND WAVE PROPAGATION (NEC-504): C-305

Year of Study: 2017-18

C-305.1	Understand the concept of basics Antennas and its parameters (radiation pattern, gain, directivity, and efficiency), antenna array, Radio communication link, SNR.
C-305.2	Analyze the point sources, different type of antenna arrays and its radiation Patterns, the electric dipole, working design of Yagi-Uda, folded dipole.
C-305.3	Analyze the working principle of loop antenna, slotted antenna Long period antenna and micro strip antenna.
C-305.4	Understand the Concepts of Different Types of Antennas.VHF, UH, Microwave Antennas, and frequency independent antennas.
C-305.5	Classify the Different Kinds of Wave Propagation like ground wave, surface wave and space wave propagation. Controlling effect of medium and earth curvature of earth on wave propagations.

ENGINEERING ECONOMICS (NHU-501): C-306

Year of Study: 2017-18

C-306.1	Describe Economy in general & economics in particular & the role of an Engineering, science & technology in an economy.
C-306.2	Understand the concept of demand and role of engineering process in maintaining and improving demand.
C-306.3	Understand demand forecasting & how the concept of Cost is helpful for an engineer before designing product and production process.
C-306.4	Determine the price of a product under various market conditions which is helpful in analyzing the price of product in future by comparing competitor price for taking pricing decisions.
C-306.5	Understand the concept of various market structures and role of engineering to sustain various types of market.

INTEGRATED CIRCUITS LAB (NEC-551R): C-307

Year of Study: 2017-18

C-307.1	Able to develop an in-depth understanding of the design principles and applications of integrated analogue circuits.
C-307.2	Able to design and realize analog filter circuits and oscillators for the given frequency and compare with theoretical values.
C-307.3	Able to design and realize the multivibrator for given parameter using 555 timer IC and compare the result with theoretical value.
C-307.4	Able to realize and analyze the comparator and Log/Antilog amplifier using op amp 741 and also design & realize the inverting/noninverting amplifier for given gain using 741.
C-307.5	Able to realize and analyse the function generator using op amp 741 and also perform the experiment to determine capture and lock range of PLL.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

CONTROL SYSTEMS LAB (NIC-551) : C-308

Year of Study: 2017-18

C-308.1	Study and analyze dc and ac motor position control system
C-308.2	Able to control the DC speed control system on open and closed loop.
C-308.3	Investigate the input/output characteristic of magnetic amplifier.
C-308.4	Analysis the Synchro Transmitter and Receiver in terms of position phase etc.
C-308.5	Simulate the performance of PID controllers and LEAD LAG compensator and also Simulate the open loop and closed loop response of linear system.

COMMUNICATION LAB- I (NEC-552): C-309

Year of Study: 2017-18

C-309.1	Able to understand amplitude & frequency modulation and demodulation and its related terms.
C-309.2	Analyze the modulation and demodulation of PAM, PWM, PPM
C-309.3	Able to understand radiation pattern of various antennas and calculation of its beam width.
C-309.4	Acquired knowledge about Super-heterodyne receiver.
C-309.5	Acquired knowledge about sampling and reconstruction of analog signals.

MICROPROCESSORS LAB (NEC-553): C-310

Year of Study: 2017-18

C-310.1	Able to understand assembly-language instructions
C-310.2	The internals of a pipelined microprocessor, cache memories, and parallel execution.
C-310.3	Able to write the programming using 8085 microprocessor.
C-310.4	Able to understand the internal architecture and interfacing of different peripheral devices with 8085 Microprocessor.
C-310.5	Able to write the programming using 8086 microprocessor.
C-310.6	Explain the parts of a computer and the workings of each part, buses and memories.

MICROWAVE ENGINEERING (NEC-601): C-311

Year of Study: 2017-18

C-311.1	Understand the basic concept of Microwaves and transmission lines like waveguides, micro strip lines and their different modes of operation.
C-311.2	Compare scattering matrix in microwave system & other 2-port network parameters and find out the scattering matrix of different microwave components like E-plane Tee, H-plane Tee, Magic Tee, Terminators, Attenuators, Phase Shifters, Isolators, Circulators and Directional Couplers as well as understand their applications.
C-311.3	Analyze the limitations of general semiconductor devices at microwave frequencies and also to understand the basic concept of different microwave devices (2-cavity Klystron amplifier, Reflex Klystron amplifiers, Magnetron , TWT& BWO) and their principles of operation and applications
C-311.4	Classify the Solid State amplifiers like microwave bipolar transistors, tunnel diodes, TEDs, Avalanche transit devices and their applications at microwave frequencies.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

C-311.5	Understand the limitations of low frequency measuring devices at microwave frequency and to study a microwave bench & its set up, slotted line carriage, VSWR meter, Also to Understand the Measurement of different parameters like power, frequency, wavelength, impedance, reflection coefficient, VSWR, Insertion & Attenuation loss, antenna characteristics at microwave
----------------	--

DIGITAL COMMUNICATION (NEC-602): C-312

Year of Study: 2017-18

C-312.1	Compare the line coding techniques and apply in the generation and detection digital modulation techniques
C-312.2	Understand the basic concepts of probabilities and random variables.
C-312.3	Evaluate the performance of digital communication system.
C-312.4	Apply the concept of spread spectrum for application in wireless communication.
C-312.5	Compute the bandwidth and transmission power and probability of error for various modulation schemes.

INTEGRATED CIRCUIT TECHNOLOGY (NEC-603): C-313

Year of Study: 2017-18

C-313.1	Able to acquire knowledge about crystal growth and wafer preparation techniques.
C-313.2	Gain the knowledge of silicon oxidation, photolithography to pattern silicon wafers.
C-313.3	Able to understand the diffusion and ion implantation and use models to calculate the impurity profiles.
C-313.4	Understand the various packaging techniques.
C-313.5	Understand the BJT, MOSFET and CMOS fabrication process.

DIGITAL SIGNAL PROCESSING (NEC-011): C-314

Year of Study: 2017-18

C-314.1	Analyze & create structures of IIR and FIR filters.
C-314.2	Able to design IIR filter using the concept of Butterworth and Chebyshev.
C-314.3	Able to design FIR filter using different types of windows.
C-314.4	Evaluate the benefits of discretization of DTFT through DFT and compare the computation efficiency of FFT and DFT.
C-314.5	Create more efficient filters using multirate signal processing.

INDUSTRIAL MANAGEMENT (NHU-601): C-316

Year of Study: 2017-18

C-316.1	Apply theoretical concepts of management control in different areas of business in various industries.
C-316.2	Understand the principle of management, process chart and flow diagram.
C-316.3	Analyze inventory control and management techniques.
C-316.4	Able to understand of Operational control. Control over time, quality and customer profitability.
C-316.5	Performance measurement, such as balanced scorecards, benchmarks.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ANTENNA & MICROWAVE LAB (NEC-651A): C-317 **Year of Study: 2017-18**

C-317.1	Acquire knowledge about Microwave spectrum and wave propagation.
C-317.2	Able to compare and analyze the performance of Wave Guide benches and source
C-317.3	Analyze the performance of Microwave Components.
C-317.4	Measure the impedance of unknown load using smith chart.
C-317.5	Understand and measure the Antenna parameters such as radiation pattern, feeding techniques.

COMMUNICATION LAB – II (NEC-652A): C-318 **Year of Study: 2017-18**

C-318.1	Compare the line coding techniques and apply as per the practical requirement
C-318.2	Compare different modulation schemes and apply as per their advantage in various applications
C-318.3	Apply different techniques in modern digital communications; particularly source coding, channel coding, modulation and detection.
C-318.4	Analyze the waveform generation through harmonics so as to gain the concept of signal processing.
C-318.5	Ability to choose the digital modulation scheme for the practical purpose on the basis of the features of each scheme.

CAD OF ELECTRONICS LAB (NEC-653): C-319 **Year of Study: 2017-18**

C-319.1	Able to implement and simulate analog circuits and digital circuits in PSPICE.
C-319.2	Able to perform ac , dc and transient analysis of analog and digital circuits
C-319.3	Able to correctly analyze a circuit and compare its theoretical performance to actual performance.
C-319.4	Foster ability to identify and code the module using different modeling styles.
C-319.5	Ability to synthesize the VHDL code.

SEMINAR (NEC-654R): C-320 **Year of Study: 2017-18**

C-320.1	Able to identified important concepts from the readings and provided depth in coverage of the topic.
C-320.2	Able to work in a group.
C-320.3	Developed effective group communication and presentation skills.
C-320.4	Developed self-management & reflection skills.
C-320.5	Able to write technical documents and give oral presentation.
C-320.6	Graduates will get familiar of recent technologies in engineering field.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

MICROCONTROLLERS FOR EMBEDDED SYSTEM (NEC-022R): C-321

Year of Study: 2017-18

C-321.1	To acquire the knowledge about the architecture of microcontroller
C-321.2	Knowledge about the instruction set and to develop skill in simple programming for 8051
C-321.3	Learn to work with timer, interrupts and serial ports.
C-321.4	Provide foundation on interfacing the external devices such as memory , DAC,ADC to develop application based systems
C-321.5	impart knowledge of different types of external interfaces including LEDS, LCD, Keypad Matrix, Switches , Seven segment display ,stepper motor to microcontroller through 8255

GENERAL PROFICIENCY (NGP-501/601): C-322

Year of Study: 2017-18

C-322.1	To develop communication skills in order to encourage them to participate in extracurricular activities.
C-322.2	To appreciate the sincerity and regularity of the students.
C-322.3	To develop the overall personality in terms of human values and confidence.
C-322.4	To nurture them to face the challenges in the corporate world
C-322.5	To give them the environment to identify their personal hobbies, so they can sharpen their personality as an individual, if not good in academics.
C-322.6	To make student good sensitive responsible citizen of india.

Microcontroller for Embedded Systems Lab (NEC-655):C-323

Year of Study: 2017-18

C-323.1	Students will have a knowledge about 8051 microcontroller along with its architecture, concept of interrupts, programming and interfacing with external world.
C-323.2	Students will learn about the basics of MSP430 microcontrollers along with GPIO port pin programming to interface with LEDs, push buttons, potentiometer, motors & accelerometer with the use of interrupts also.
C-323.3	Students will have an extensive knowledge about various on-chip peripherals like Watchdog timer, Timer, PWM, ADC and DAC etc.
C-323.4	Students will have an understanding of serial communication programming of USB and SPI with MSP430 having the knowledge of their protocols.
C-323.5	Students will get an exposure with practical applications like Wi-Fi for communication and CC3100 module for setting of IP address.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ENTREPRENEURSHIP DEVELOPMENT (NOE-071): C-402

Year of Study: 2017-18

C-402.1	Apply effective written and oral communication skills to business situations
C-402.2	Demonstrate the ability to provide a self-analysis in the context of an entrepreneurial career.
C-402.3	Use critical thinking skills in business situations.
C-402.4	Apply an ethical understanding and perspective to business situations.
C-402.5	Demonstrate the ability to develop a well-presented feasible business plan

SATELLITE COMMUNICATION (NEC-045): C-403

Year of Study: 2017-18

C-403.1	Understand the basics of radar and radar equation.
C-403.2	Able to impart knowledge behind MTI and its performance.
C-403.3	Designing of tracking radar and detail study of elements of satellite communication.
C-403.4	Evaluate of altitude and orbit control systems and design of satellite links.
C-403.5	Analysis of direct broadcast satellite television and GPS receiver operation.

OPTICAL COMMUNICATION (NEC-701): C-404

Year of Study: 2017-18

C-404.1	Understand optical communication, optical spectral band, total internal reflection, electromagnetic mode theory, phase & group velocity and also to differentiate between optical fiber communication and other communication system.
C-404.2	Able to differentiate type of fiber required for transmission and also calculate the attenuation, group delay, losses, cut off wavelength for the given parameters
C-404.3	Analyze the optical amplifiers and important parts at the transmitter (Semiconductor lasers/LEDs, modulators etc) as well as at the receiver sides (optical detector etc.) of the optical communications system, and determine resonant frequency external quantum efficiency.
C-404.4	Compare the different types of photo detectors (GaAs avalanche photo diode, PIN photo diode)
C-404.5	Design optical digital link (point to point link) for the given parameters and analyze the sources of errors, receiver error sensitivity.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

DATA COMMUNICATION NETWORKS (NEC-702B): C-405

Year of Study: 2017-18

C-405.1	Gain knowledge of basic components of Data communication and their characteristics, mathematical modeling for communication channel.
C-405.2	Represent the deterministic and stochastic signals, random noise, analog and digitally modulated signals and also determine the signal to noise ratio.
C-405.3	Optimize the receivers for corrupted signals by AWGN, error performance, modulation methods (OFDM, MIMO), source & channel coding (Hamming code).
C-405.4	Gain knowledge of error and flow control, sliding window protocol, HDLC, PPP, LAN, Ethernet, hubs, bridges and switches.
C-405.5	Gain knowledge of Transport layer and its protocols, static & dynamic channel allocation in LAN and MAN, multiple access protocol (wavelength division), collision free protocol, limited contention protocol, and IEEE standard 802.3.

VLSI DESIGN (NEC-703): C-406

Year of Study: 2017-18

C-406.1	Understand the Fabrication of MOS device (design partitioning, logic design, circuit design, physical design, design verification packaging and testing).
C-406.2	Analyze transient response, RC delay, linear delay, logical efforts, static and dynamic power for the given device.
C-406.3	Optimize the designing by power- delay optimization, interconnect modeling.
C-406.4	Able to compare different semiconductor memories (DRAM, SRAM, ROM, Flash).
C-406.5	Able to find the faults, and find controllability and observability for logic circuits and also design the low power CMOS logic circuits through voltage scaling, optimization of switching activity, reduction in switching capacitance and adiabatic logic circuits.

ELECTRONIC CIRCUIT DESIGN LAB(NEC-752A): C-408

Year of Study: 2017-18

C-408.1	To carry-out design of electronic circuit having some desired functionality using basic electronic building blocks like op-amp, timer IC 555, OTA, analog multiplier, TTL/CMOS ICs etc.
C-408.2	Develop the ability to analyze and design analog electronic circuits using discrete components.
C-408.3	To verify the circuit operation and output characteristics with the help of CAD of electronics tools such as Pspice/multisim.
C-408.4	To implement the circuit using bread board/printed circuit board and verify the working and characteristics using instruments like CRO, function generator, multimeter etc.
C-408.5	Design, construct, and take measurement of analog/digital circuit and compare experimental results in the laboratory with theoretical analysis.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

MINOR PROJECT(NEC-754): C-409**Year of Study: 2017-18**

C-409 .1	Able to manage as a member of team to use the technique, skill and modern engineering tools and to collect and disseminate information related to selected project
C-409 .2	Able to find solutions to authentic (real world and ill-defined) problems.
C-409 .3	Able to design a system, component or process to meet desired need within realistic constraints.
C-409 .4	Able to develop an action plan to improve presentation skills and have the confidence to make more of an impact on their audience.
C-409 .5	Able to write research-based documents, including journal and conference papers.

INDUSTRIAL TRAINING VIVA-VOCE(NEC-753):C-410**Year of Study: 2017-18**

C-410 .1	To plan, organize and engage in active learning experiences both inside and outside the classroom.
C-410.2	Identify and fill the gap between classroom and the real field world
C-410 .3	Explore their theoretical skills in “real life” examples of business and engineering management
C-410 .4	Identify, understand, and tackle a real field problem by applying their theoretical & practical knowledge and experiences in real field situation.
C-410 .5	To understand the nuances and realities of the shop floor, understand the risky conditions in which workers work, the people management challenges involved in managing workers apart from getting hands-on technical knowledge.

OPTICAL NETWORKS (NEC-802): C-411**Year of Study: 2017-18**

C-411.1	Able to understand optical network design and its elements and also the nonlinear effects.
C-411.2	Able to understand different type of components isolators and circulators, Mach Zander interferometer, waveguide, AOTF, optical multiplexer and filters.
C-411.3	Able to understand SONET/SDH and IP network architecture and frames.
C-411.4	Define the optical transport network, light path topology, and protection in SONET/SDH and client layers.
C-411.5	Able to understand optical time domain multiplexing and concept of interleaving.

WIRELESS& MOBILE COMMUNICATION (NEC-801): C-412**Year of Study: 2017-18**

C-412.1	To understand the practical concept behind origination of call and its completion, wireless communication link, cellular system components and wireless channel modelling.
C-412.2	Compute the correlation between Diversity and fading, Equalization and ISI.
C-412.3	Practically relate the distribution of channels for wireless communication. Also Understand the multiplexing and multiple access (FDMA, TDMA, CDMA, OFDMA, ALOHA)
C-412.4	Compare the different Wireless communication systems and standards: GSM, IS-95 to CDMA 2000 and their importance in communication.
C-412.5	Understand the practical concept behind wireless communication adhoc networks (WiFi, Wi-max, Li-Fi, and its evolution till 4G.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

ELECTRONICS SWITCHING (NEC-041): C-413

Year of Study: 2017-18

C-413.1	Understand the historical developments of telecommunication networks & switching systems and compare the crossbar switching, electronic switching and digital switching.
C-413.2	Understand the switching functions, space & time division switching, two dimensional and digital cross connect switching.
C-413.3	To understand the probabilistic methods & statistics to solve telecommunication n/w problems and to design, develop & implement such networks.
C-413.4	To understand the basic concepts of signaling techniques used in transfer of voice and control signals through telecommunication n/w.
C-413.5	To design data networks and understand the concepts of networks used to carry voice as well as data. Also understand the packet switching concept, routing and flow control, TCP/IP, ATM.

MAJOR PROJECT (NEC-851): C-414

Year of Study: 2017-18

C-414.1	Able to manage as a member of team to use the technique, skill and modern engineering tools and to collect and disseminate information related to selected project
C-414.2	Able to find solutions to authentic (real world and ill-defined) problems.
C-414.3	Able to design a system, component or process to meet desired need within realistic constraints.
C-414.4	Able to develop an action plan to improve presentation skills and have the confidence to make more of an impact on their audience.
C-414.5	Able to write research-based documents, including journal and conference papers.

NON CONVENTIONAL ENERGY RESOURCES (NOE-081): C-415

Year of Study: 2017-18

C-415.1	Understand the various non-conventional energy resources.
C-415.2	Understand the concept of Solar Thermal Energy.
C-415.3	Compare solar thermal energy with Geothermal Energy.
C-415.4	Understand the basic working Principle behind Thermo-electrical and thermionic Conversions.
C-415.5	Understand the concept of Bio-mass and its usage.

GENERAL PROFICIENCY (NGP-701/801): C-416

Year of Study: 2017-18

C-416.1	To develop communication skills in order to encourage them to participate in extracurricular activities.
C-416.2	Students will become sincere and regular in all curricular and extracurricular activities.
C-416.3	Students will develop their overall personality in terms of human values and become good sensitive responsible citizen of India
C-416.4	Students will become confident to face the challenges in the corporate world
C-416.5	Students will be able to identify and explore their personal hobbies and can sharpen their personality as an individual.

Department of Electronics & Communication Engineering

Vision of the Department: To be recognized as a Center of Excellence in Electronics and Communication Engineering by providing valuable resources to the students for the purpose of nurturing their knowledge and skills to serve the nation by solving the technological problems of modern society in the field of Electronics and Communication.

INFORMATION THEORY & CODING(NEC-031): C-417

Year of Study: 2017-18

C-417.1	To understand the concepts of entropy, mutual information and Jensen, log sum fano's inequality.
C-417.2	To compress the data using different source codes (Huffman codes, Shannon Fano Elias coding and Kraft inequality for uniquely decodable code).
C-417.3	To understand the concept of channel capacity, channel coding theorem, 7.2 symmetric channel and also determine the channel capacity for given information.
C-417.4	To develop the block codes (single parity check, product code, repetition code, hamming code) and linear codes (parity check matrices, shortened and extended code) for given information.
C-417.5	To encode the convolution codes for the given information and determine generator matrices, generator polynomials for the given convolution codes and graphically represent the given convolution codes.

OPTICAL COMMUNICATION AND NETWORKING LAB (NEC-751): C-418 **Year of Study: 2017-18**

C-418.1	Ability to identify and study different types of types of cables, connectors and different commands in networking.
C-418.2	Able to make subnet and configure router and DHCP servers.
C-418.3	Able to configure VLAN.
C-418.4	Able to setup fiber optic analog link & able to understand characteristic parameter in fiber and losses in optical fiber.
C-418.5	Understanding of multiplexing, encoding technique
