## THIRD YEAR (2018-19)

### MANAGERIAL ECONOMICS (RAS-501): C301

Course Code	Course Outcome
<b>C-301.1</b>	To acquire the knowledge of economic principles applied to a company's decision making in terms of economic viability.
<b>C-301.2</b>	To develop the understanding of Supply, Elasticity of Supply and demand forecasting which contribute in the decision-making.
<b>C-301.3</b>	To analyze the concept of industrial production, factors of production and various elements of cost.
<b>C-301.4</b>	To explain about market, various pricing policies and determining price and output in optimizing the profit.
<b>C-301.5</b>	To apply the knowledge of Indian Market and Economy as a whole to take various macro level industry decisions.

**DATABASE MANAGEMENT (RCS-501): C303**

**Year of Study: 2018-19**

Course Code	Course Outcome
<b>C303.1</b>	Students can differentiate database systems from file systems by enumerating the features provided by database systems and describe each in both function and benefit.
<b>C303.2</b>	Students are able to create and populate a RDBMS for a real life application, with constraints and keys using SQL.
<b>C303.3</b>	Students can analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
<b>C303.4</b>	Students can apply mechanisms for information retrieval from a database satisfying the ACID properties.
<b>C303.5</b>	Students apply various techniques for concurrency control in multi-transaction systems.

### DESIGN AND ANALYSIS OF ALGORITHM (RCS-502) : C304 Year of Study: 2018-19

Course Code	Course Outcome
<b>C-304.1</b>	Students demonstrate knowledge to select appropriate algorithms and the methods to measure and analyze the performance of an algorithm. Able to implement appropriate sorting/searching technique for given problem.
<b>C-304.2</b>	Ability of understanding and applying various advanced data structures concepts like red black and B, B plus tree
<b>C-304.3</b>	Students demonstrate knowledge of problem solving using greedy approach and the approach to divide the problem into smaller problems of same nature (Divide and Conquer approach).
<b>C-304.4</b>	Students demonstrate knowledge of problem-solving using Backtracking, Dynamic Programming and Branch and Bound techniques.
<b>C-304.5</b>	Students have hands on experience on various advanced topics on algorithms. Students can classify different NP Complete problem into various levels of complexity.

### PRINCIPLE OF PROGRAMMING LANGUAGE(RCS-503):C-305 Year of Study: 2018-19

Course Code	Course Outcome
<b>C-305.1</b>	Students acquire knowledge of evolution of programming languages, their roles, paradigms and translation processes.
<b>C-305.2</b>	Students understand various semantics and syntax related to program flow control in Imperative programming languages and code reusability.
<b>C-305.3</b>	Students can make the comparative analysis between imperative, object-oriented programming and functional programming paradigms.
<b>C-305.4</b>	Students will acquire knowledge related to semantics of logical, network and concurrent programming environment.
<b>C-305.5</b>	Students will acquire the capability to implement lambda calculus queries.

## THIRD YEAR (2018-19)

**WEB TECHNOLOGY (RCS-E12): C306**

**Year of Study: 2018-19**

Course Code	Course Outcome
<b>C-306.1</b>	Students are introduced to the concept of Web technologies, Internet, Client-Server Computing and elementary Core Java. Students also understand how to design, implement, test, debug, and document programs that use core java concepts and graphical user interfaces in Java using applet and AWT that respond to different user events. .
<b>C-306.2</b>	Student is familiarized with fundamental language in Web Technologies and acquire knowledge and skills for creation of web site considering both client and server side. Students are able to implement interactive web page(s) using HTML, CSS.
<b>C-306.3</b>	Students learn JavaScript and design a responsive web site using HTML5 and CSS3. Students has acquired the skill to do networking using java
<b>C-306.4</b>	Students are able to make a reusable software component, using Java Bean and understand web-based enterprise applications using Enterprise JavaBeans (EJB). Students also learn to access database through Java programs, using Java DataBase Connectivity (JDBC)
<b>C-306.5</b>	Students are able to develop servlet and JSP applications and implement Session Management techniques.

**Database Management System Lab (RCS-551) : C307**

**Year of Study: 2018-19**

Course Code	Course Outcome
<b>C307.1</b>	Students can explain the features of relational database and SQL.
<b>C307.2</b>	Students can design ER Model for a database for a given real time application.
<b>C307.3</b>	Students can create and populate an RDBMS for a given problem domain with constraints and keys using SQL.
<b>C307.4</b>	Students can apply data manipulation language to query, update and manage the database.
<b>C307.5</b>	Students will understand the concepts of database security and integrity.

**Design and Analysis of Algorithm Lab (RCS-552) : C308**

**Year of Study: 2018-19**

Course Code	Course Outcome
<b>C-308.1</b>	Students are able to analyze the performance of various algorithms in best case, average case and worst case. Students are able to implement various sorting, searching and graph traversal algorithms.
<b>C-308.2</b>	Students develop better understanding of advanced data structures like rbtree, heaps and btrees.
<b>C-308.3</b>	Students acquire skill to identify the problem given and design the algorithm using various algorithm design techniques.
<b>C-308.4</b>	Students develop better understanding of optimization techniques like dynamic programming, backtracking and branch and bound and their classical problems.
<b>C-308.5</b>	Students understand the importance of different algorithmic paradigms by comparing the performance of different algorithms for same problem in team.

### Principles Of Programming Language Lab(NCS-553) : C309 Year of Study: 2018-19

Course Code	Course Outcome
<b>C-309.1</b>	Students understand the significance of an implementation of programming language in a compiler or interpreter
<b>C-309.2</b>	Students learn and understand the benefits and constraints for implementation in imperative, object-oriented, functional, and logical programming language
<b>C-309.3</b>	Student demonstrates the ability to implement projects in imperative, object-oriented, functional, and logical programming language
<b>C-309.4</b>	Students demonstrate the ability to analyze and select appropriate programming language for certain classes of programming problems
<b>C-309.5</b>	Students understand good use of debuggers and related tools.

## THIRD YEAR (2018-19)

**COMPILER DESIGN (RCS-602): C314**

**Year of Study: 2018-19**

Course Code	Course Outcome
<b>C-314.1</b>	Students are able to understand how a program written by a user is converted into a code that the machine understands using a compiler. Students are made familiar with commercial compilers like YAAC. Also understand the concept of ambiguous grammars and context free grammars.
<b>C-314.2</b>	Students are able to understand compiler parsing techniques. Students are skilled to represent the various symbols used in a program in a table that can be further used for processing.
<b>C-314.3</b>	Students are able to represent the program in the form of three address code and parse tree. Various translation schemes are demonstrated.
<b>C-314.4</b>	Students are able to implement and maintain the symbol table, allocate storage space and manage error detection and recovery.
<b>C-314.5</b>	Students are able to generate optimized machine code that eventually runs on the hardware to carry out the execution.

**COMPUTER GRAPHICS (RCS-603): C315**

**Year of Study: 2018-19**

Course Code	Course Outcome
<b>C-315.1</b>	Students are able to understand the basics of computer graphics, different graphics system and discuss various algorithms for scan conversion and their comparative analysis.
<b>C-315.2</b>	Students are able to understand the use of geometric transformations on graphical objects and their application in composite form and also extract scene with different clipping methods
<b>C-315.3</b>	Students are able to analyze complex graphic objects with 3-D viewing, 3-D transformations, clipping and use of various projections
<b>C-315.4</b>	StudentStudents are able to generate the Bezier and Bspline curves with mathematical interpolating functions with use of blending parameters
<b>C-315.5</b>	Students are able to explore visible surface detection techniques for display of 3D scene on 2D view and use illumination models

### DESIGN AND DEVELOPMENT OF APPLICATIONS (RIT-E21): C-316

Year of Study: 2018-19

Course Code	Course Outcome
<b>C-316.1</b>	Students are able to understand, identify and create mobile applications with most suitable type and also able to perform requirements gathering, validation, publishing and delivery.
<b>C-316.2</b>	Students are able to evaluate and justify the type and architecture they have chosen for their work and also able to analyze and compare their work with existing work in the field.
<b>C-316.3</b>	Students understand, learn and apply designing applications with multimedia & web capabilities and integrate them with GPS, social media. They also learn about cloud environments and design patterns for mobile applications.
<b>C-316.4</b>	Students get the knowledge of development of applications using android platform. They are also able to understand and remember various aspects of android environment, creating interfaces, data persistence using SQLite database and interaction with server-side apps through Google maps, GPS, WI-FI & social media.
<b>C-316.5</b>	Students understand and gain knowledge for Objective-C, iOS features, UI and touch frameworks, data persistence using SQLite. Also learn introduction to swift its features and iOS marketplaces.

Dataware Housing & Data Mining (RIT-E22): C317

Year of Study:2018-19

### THIRD YEAR (2018-19)

Course Code	Course Outcome
<b>C-317.1</b>	Students learn the importance for data storage of an organization as a data warehouse. They are able to create and analyse the data warehouse for an organization.
<b>C-317.2</b>	Students learn about the various methods and techniques used for data warehousing implementation. They understand the knowledge about the concept of storing the data on multiple systems.
<b>C-317.3</b>	Students understand the various issues while handling a data. They are able to analyse the raw data to make it suitable for various data mining algorithms.
<b>C-317.4</b>	Students well versed in all data mining algorithms, methods of evaluation. Students are able to implement the appropriate data mining methods like classification, clustering or Frequent Pattern mining on large data sets.
<b>C-317.5</b>	Students are able to use commercially available softwares for data mining. They can analyze the problem domain, use the data collected in enterprise, interpret and visualize the results.

### THIRD YEAR (2018-19)

Course Code	Course Outcome
<b>C-318.1</b>	Students are able to understand and simulate various network topologies using CISCO packet tracer.
<b>C-318.2</b>	Students are able to create network in CISCO Packet Tracer using Routers connected with other network access equipment (like switches and buses) subsequently connected with end devices. Use commands to establish connectivity among them.
<b>C-318.3</b>	Students are able to understand and implement network layer protocols (like DHCP, RIP, OSPF) using CISCO packet tracer.
<b>C-318.4</b>	Students are able to resolve IP address to host name and host name to IP address using JAVA/C.
<b>C-318.5</b>	Students are able to implement a TCP based Client-Server System for one sided communication in JAVA/C.

Course Code	Course Outcome
<b>C-319.1</b>	Students are able to gain knowledge about language processing Tools like LEX and YACC.
<b>C-319.2</b>	Students are able to check whether regular expressions belong to grammars or not.
<b>C-319.3</b>	Students are able to understand the concepts like grammars, languages, operators and they are also able to check whether grammar is ambiguous or not and its removal using left recursion.
<b>C-319.4</b>	Students are able to understand various parsing techniques like shift reduce, LR parsing.
<b>C-319.5</b>	Students are able to understand code optimization algorithms.
